

Kwentas Klaras System Overview

Introduction to Kwentas Klaras

Speaker 1: Welcome! Today we introduce **Kwentas Klaras**, described in the user manual as “a Digital Project Management Information System” and an innovation project. In other words, it’s a web-based tool built (for example, by the Boljoon LGU) to help manage and track the budgeting and progress of public projects. The name “Kwentas Klaras” suggests clear accounting for funds. For example, officials in Boljoon can use official government emails (e.g. *@boljoon.gov.ph*) to register and access the system. Our presentation will walk through how the system works step by step.

Logging In and Account Setup

Speaker 1: First, let’s cover **logging in**. To access Kwentas Klaras, you enter your username and password on the login page. There’s an eye icon to show or hide the password as you type. After entering credentials, complete the Cloudflare security verification and click “**Login to Kwentas Klaras**”.

If a user forgets their password, the “**Forgot Password**” link guides them through a reset. You enter your official email, request a verification code, then enter the code and new password to reset it. After changing the password, you return to the login page and sign in with the new credentials.

Once logged in, you see the **Left Panel – Account Management**. This sidebar includes options like “**Admin Dashboard**” to switch to the admin view, “**Add Account**” to create a new user, “**Enable 2FA**” for two-factor authentication, and “**Logout**” to sign out. For example, clicking *Add Account* opens a form to register another user. This completes basic account setup and secure login.

(Transition) **Speaker 1:** Now that we’re logged in and have covered account setup, **Speaker 2** will explain the dashboard layout.

Dashboard Layout

Speaker 2: On the **Dashboard**, the screen is split into the left sidebar and the main (center) panel. In the **left sidebar**, we already saw *Account Management* options like *Add Account* and *Logout*. These allow quick access to user-related actions.

Speaker 3: In the **center panel** of the Dashboard, you see the main modules of the system. At the top, there’s a box showing “*PPA under 20% Local Development Fund*” – this highlights projects with low utilization. Below that are buttons for “**Continuing Projects**”, “**Current Projects**”, and “**Add Project**”. Clicking these takes you to pages for managing projects.

Further down, there are sections for **Procurements**, **Financial Management**, **Monitoring & Evaluation**, and **Reports**. For example, under Financial Management you’ll find *Obligations*, *Disbursements*, and *Check Payment* – these track financial commitments and releases. The M&E section lets you *monitor and evaluate* ongoing projects, and the Reports section has a “*Generate Reports*” button. All these are visible on the main dashboard after login.

(Transition) **Speaker 3:** That covers the dashboard overview. Next, I’ll explain how to **add and manage projects**.

Adding and Managing Projects

Speaker 3: To **add a new project**, click “**Add Project**” on the dashboard. A form appears to enter project details. For example, you might enter:

- **PPA (Project Title):** *Road Widening Project Phase 1.*

- **Implementing Unit:** *Tourism Office* (the department responsible).
- **Location:** *Barangay El Pardo*.
- **Appropriation (Budget):** say *₱500,000*.
- **Start Date / End Date:** e.g. *10/31/2025 to 06/24/2026*
- **Remarks:** *“No PPMP/APP/POW”* (if any notes).
- **Project Code:** *1234567*.
- **Services category:** e.g. *Social*.
- **Year:** *2025* (typically auto-filled).

After filling these fields, click **“Create Project”**. A confirmation dialog shows a summary of what you entered. If everything looks good, you click **Confirm** to save the project; or **Cancel** to go back and edit if needed.

Once a project is created, you can manage it under **Continuing Projects** or **Current Projects**. In **“Continuing Projects”**, you see a list of ongoing projects. You can **Sort** or **Search** the list. The table shows columns like PPA (Project Title), Implementing Unit, Code, Remarks, and notes. For example, if there are no projects, it will display *“No projects found.”*. If there are many projects, use navigation buttons at the bottom (First/Next/etc.).

Speaker 4: In **“Current Projects”**, the list is similar (PPA, Unit, Code, Remarks, etc.) with action buttons. Each project row has **“Update”** and **“Delete”** actions. For instance, clicking *Update* on a project opens the edit form. You can then change any field. The manual shows examples: if editing the *Road Widening Project Ph.* location, you could change *Barangay El Pardo* or dates. For example, you might update **Start Date** to

10/31/2025 or **Code** to *1234567*. After editing, click *Save* to apply changes or *Exit* to cancel.

(Transition) **Speaker 4:** Now let’s look at the financial modules – budgeting, obligations, and disbursements.

Budget, Obligations, and Disbursements

Speaker 4: A project must be awarded before adding obligations or budgets. Once it is, you can record financial details. To **add an obligation** (a planned payment commitment), open the project and click the **Obligation** button. A dialog asks for: **Payee** (the entity to be paid), **Date**, and **Amount**. For example, payee might be *“John Doe Construction”*, date *09/05/2025*, amount *₱70,000*. Then click **Submit** to save.

Figure: Sample form for adding a project obligation.

Speaker 5: Similarly, to **add a budget** allocation to the project, click **Budget**. Enter a **Budget Name** (e.g. *Equipment Rental*), **Date** (budget approval date), and **Added Budget** amount. For instance, *Budget Name: Equipment Rental, Date: 09/28/2025, Added Budget: 50,000*. Then click **Submit** to save, or **Exit** to cancel.

Figure: Add Project Budget form (blank example).

Speaker 5: To record a **disbursement** (an actual payment), go to the Disbursement module. You fill in fields like **Voucher Number** (e.g. *DV-2025-0012*), **Purpose** (e.g. *Payment for construction materials*), **Date** (e.g. *09/28/2025*), and **Disbursement Amount** (e.g. *₱70,000*). Then click **Submit** to save the payment record.

Figure: Add Disbursement form (example entry).

Speaker 5: In summary, using these forms lets you track how the project’s budget is allocated (**Budget**), committed (**Obligations**), and

spent (**Disbursements**). The system automatically calculates remaining balances and utilization rates for you.

(Transition) **Speaker 4:** Next, I'll talk about procurements and payment checking.

Procurements and Payments

Speaker 4: The **Procurements** module lets you manage procurement activities. It lists procurement entries by project. You can click **Update** on a procurement to edit details like remarks. In the dialog, change the remark and click the blue **Update** button to save. A confirmation appears warning that the change is permanent; click **Yes, update it!** to finalize or cancel if needed.

Speaker 4: The **Check Payment** screen shows each project's payment status. It has columns like *Remaining Obligations* and *Total Obligation*. For example, if a project has no remaining obligations, it would show ₱0 under *Remaining Obligations*. There's also an *Add* column: if the project isn't awarded yet, it displays *"Project needs to be Awarded"*, meaning you can't add a payment until it's official.

(Transition) **Speaker 5:** With finances and payments done, let's move to tracking and reports.

Monitoring, Reporting, and Evaluation

Speaker 5: The **Monitoring & Evaluation (M&E)** page gives a quick overview of project utilization. At the top are summary boxes: *"Projects Above 50% Utilization Rate"* and *"Projects Below 50% Utilization Rate"*. For example, if one project has used 75% of its budget, it counts in the above-50% box.

Below that is a detailed view for a selected project, showing *Project Budget*, *Project Obligation*, *Project Remaining Balance*, and *Utilization*

Rate. If a project is spending slowly, a red "budget underutilized" tag appears (as shown around *Road Widening Project Phase 1* in the manual). There's also a **"Switch to visual reports mode"** button which can display charts or graphs instead of a table.

Speaker 5: In **Generate Project Reports**, the screen lists all projects (PPA, Unit, Code, Services). You can use the sort dropdown and search bar to filter projects, then click *Search* to apply filters. To get reports, click the green checkmark under "Download All" for an individual project, or click the **Download All** button at top-right to export all. The system will generate files (like an XLSX) with the selected project data.

Navigation Features

Speaker 5: On the left-hand **Navigation menu**, there are extra analytics views. The menu includes **Utilization Rate**, **Spent**, **Comparisons**, **Department**, and **Homepage**.

- **Utilization Rate:** This page shows an overall utilization percentage (as a circular chart) of all projects. The percentage reflects how much of the budgets have been spent system-wide.
- **Spent:** This page has a graph (or table) of spending over time. You can switch between monthly and daily views. The Y-axis is amount in pesos, X-axis is time (months/days).
- **Comparisons:** This chart compares **Disbursements vs. Obligations** over months. The X-axis is time (months) and Y-axis is amount of money. This helps see spending vs commitments in the same chart.

- **Department:** This shows each department's utilization rate in a bar chart. Each bar is a department (e.g. *Tourism Office*) and its percentage of budget used. You can easily see which departments are under- or over-utilizing their funds.

At any point, you can click **Homepage** or **Back** buttons to return to the main dashboard.

Administration Panel and User Management

Speaker 5: Finally, the **Admin Dashboard** is for system administrators. It has sections for managing **Users**, **Groups**, and auditing actions. For example, in *User* management you can add, edit, or remove user accounts. The *Groups* section lets you set user permissions. There's also an *Easy Audit* app that logs CRUD (create/read/update/delete) events and login events for security. The right panel shows **Recent Actions**, so you can see who made changes recently.

When creating a new **Admin Account**, the form asks for a username, full name, government email, department, and password. You enter those and request an OTP code, which is emailed to you. After entering the 6-digit code, you click **Create Account** to register. This process ensures that only authorized staff can access the admin functions.

Conclusion (Speaker Transitions)

Speaker 1: In summary, Kwentas Klaras is a full project management and budgeting system. We walked through logging in, the dashboard, and the core modules for managing projects and finances.

Speaker 2: Then we covered procurement tracking and payments, as well as monitoring tools and report generation.

Speaker 3: The navigation features give clear analytics on utilization and spending trends.

Speaker 4: Finally, the Admin panel provides user management and audit logs to keep the system secure.

Speaker 5: Thank you for listening. We hope this overview helps you understand how each part of Kwentas Klaras works together to make project budgeting transparent and efficient.

All Speakers (together): Now we'll be happy to take any questions.
