

Features/module	Volatility (L/M/H)	Completeness (L/M/H)	Complexity (L/M/H)	Risk Level (L/M/H)	Notes / Why Risky?
Admin Dashboards and Reports	M	L	M	L	Frequent changes in reporting requirements and integration with multiple data sources make it prone to volatility.
Alumni and Tracer Services	M	L	L	M	Alumni data is critical and requires up-to-date tracking, so changes may impact overall system performance and data accuracy.
Job Placement / OJT Coordination	M	L	L	M	Changes in job market demand can affect system requirements causing instability.
Faculty / Staff Access Module	M	L	M	H	Complex role-based access could lead to unauthorized access or data leak, posing a major security risk.
Student Activity / Events Monitoring	M	L	M	L	Frequent updates for different activity types, but it is less critical for core operations.

Identify the Highest Risk Features

- **Faculty / Staff Access Module** stands out as the highest risk due to its high complexity and security concerns.
- **Priority Risk:** Faculty / Staff Access Module

Mitigation Plan

- **Faculty / Staff Access Module → Mitigation:**
Implement robust role-based access control (RBAC), conduct frequent security audits and maintain a fail-safe for sensitive data handling.
Use sandbox environment for testing role (permissions) assignments and access permissions before live deployment.
